Summary

Full-stack engineer trusted to deliver and stabilize production systems under real-world constraints. With hands-on experience across Japan, China, and Europe, I make sober engineering decisions—adopting new technologies, including generative AI, only when they measurably reduce risk or accelerate delivery in production.

Education

Degree	Institute	Year
M. Graduate School of Information Science	Tohoku University	2023.04-2025.02
Entrepreneurship Program	University of California, Davis	2024.02-2024.03
B. Computer Science and Information Systems*	Warsaw University of Technology	2018.10-2021.02
B. Digital Media Technology*	North University of China	2016.09-2021.07

* Completed under a 2+2 joint degree (double degree) program between North University of China and Warsaw University of Technology.

Experience

- Fuji Soft Inc. July 2025 - Apr 2026
Application Engineer (POS System Refactoring) Kanagawa, Japan
 - Refactored a POS system into a multi-platform Flutter architecture, rebuilding membership, member rewards, and payment flows and improving runtime performance by ~20%.
 - Reduced debugging and validation cost by 2–3× by unifying physical and virtual test flows across full-self, semi-self, and assisted-self registers, with real-device validation via Tera Term and UltraVNC.
- SenseTime Group Limited March 2021 - May 2022
Front-end Interactive Engineer Shanghai, China
 - Built browser-based coding game pages for K–12 students with PIXI.js, Egret, and LayaBox, reducing refactor and maintenance effort by nearly half.
 - Integrated the pages into the React-based SenseTime Education Kit via raw JavaScript and iFrame, improving runtime performance and interaction responsiveness by ~25%.
- Huawei Technologies Co., Ltd. May 2020 - Feb 2021
Front-end Engineer Warsaw, Poland
 - Maintained Huawei’s internal Northeast Europe digital service platform with Vue.js and Ant Design (Vue), serving 80+ users and improving usage efficiency by ~15%.
 - Built internal Python tools with pandas, openpyxl, and tk-based UI, accelerating Excel batch workflows by ~60%.

Projects

- Animentor (Personal Project) Dec 2025 – Present
AI-driven Goal Continuity App Tokyo, Japan
 - Built an AI-driven mobile app for goal tracking and continuity support with Flutter, FastAPI, PostgreSQL, and AWS Lightsail, with 10+ active users.
 - Implemented LLM-based response routing, state updates, and follow-up action handling across goal, progress, persona, and conversation state, and built backend APIs for model integration, notification triggers, and state management.
 - Implemented push notification flows with FCM and APNs, and tested iOS distribution through App Store Connect and TestFlight, including streaming response, async processing, and background jobs.
- Internal Sales Search Platform with RAG-based Retrieval Jun 2025 – Jul 2025
Colorful Inc. Tokyo, Japan
 - Developed an internal sales support system with Next.js, AWS Lambda, and DynamoDB, reducing manual coordination time by ~60%.
 - Implemented RAG-based semantic search with Pinecone, OpenAI, and Cohere, improving matching accuracy by ~20%.

Technical Skills

- Programming Languages: JavaScript / Node.js, Dart, Python, HTML5, C#, C++, Java, Go
- Databases: PostgreSQL, Amazon DynamoDB
- Frameworks & Tools: Flutter, React, Vue.js, Next.js, AWS Lambda, Docker, Vercel
- Operating Systems: MacOS & iOS, Windows 11, Linux & Android

Licenses and Certifications

- Japanese Language Proficiency Test - N1 2024
- Toefl - 81
- Fundamental Information Technology Engineer Examination (Japan, national IT certification) 2024
- Class 1 Driver’s License (Standard Vehicle)

Miscellaneous

- Registered Musician in NetEase music platform, Music Production, Genres: EDM, Future Pop, Trance, etc. 2018
